The PRG1-Com software is used to set all the operating parameters required by the MC-PRG1 programmer.

PRG1-Com is used to set work sizes (length of the adhesive sections and pauses, name of size) with parameters.

PRG1-Com also has a complete diagnosis procedure used to check the efficiency of the spray starting sensors (trigger) of the outputs and of the encoder.

If the system is used in encoder mode, PRG1-Com is used to set the operational parameters (data related to the encoder, minimum and maximum working speed, gun compensations) either manually or via automatic teach-in.

Minimum system requirements:

- Operating system: Windows 95, 98 , ME ,NT4, 2000, XP
- Computer: 100% Windows compatible with serial port RS232
- CPU: 200MHz or superior

Windows is a registered trade mark owned by Microsoft Corporation
