The **pneumatic gun B460** can be used in any application where either section or spray fluid deposition is requested (paint, adhesive etc.).

Its speed means that it can also be used on lines where very short activation times are requested.

When compared to other guns, the B460 gun offers many advantages:

- Use of just one pneumatic inlet: the dispensing command (needle opening) is mutual with the spray command, with obvious advantages in fulfilling the gun management system.
- Possibility to continually regulate the mist spray through to totally eliminating the spray function
- Compact dimensions (maximum overall dimensions 120 x 60 x 60mm)
- Simple to service and clean periodically
